

Career objective

Java Full Stack Developer with 1+ years of experience in building scalable microservices using Spring Boot, Hibernate, and Angular. Skilled in RESTful API development, JWT authentication, and MySQL optimization. Experienced in CI/CD pipelines, Agile methodologies, and delivering high-performance enterprise applications.

Education

- M.SC (CS) – 2024
- St. Joseph's College (Autonomous) -Trichy
- CGPA-7.81/10

Professional Experience

- Software Developer
- TVM Infotech Private Limited | **Jul 2024 – Present**

Key Contributions:

- Designed and developed scalable **RESTful microservices** using Java, Spring Boot, and Hibernate for high-performance enterprise applications.
- Implemented **JWT-based authentication and role-based authorization**, securing inter-service communication via API Gateway and Feign clients.
- Built and maintained a **microservices architecture** (Auth Service, Exam Service, Gateway Service), enhancing scalability, maintainability, and service isolation.
- Optimized **MySQL database schemas and complex queries**, improving API performance and data processing efficiency.
- Integrated **third-party APIs and internal services**, enabling seamless data exchange across distributed systems.
- Upgraded **Angular** application from legacy versions to the latest version, improving performance, security, and compatibility with modern frameworks.
- Contributed to **MSAL authentication integration** in Angular applications, resolving issues related to token handling, routing, and API communication.
- Performed **end-to-end API testing and validation** using Postman and frontend integration.
- Participated in **code reviews**, promoting clean code practices and maintaining high code quality standards.
- Monitored and resolved **production issues**, implementing long-term fixes to enhance system stability.
- Worked in an **Agile environment**, actively contributing to sprint planning, stand-ups, and retrospectives.

Project Details:

Project 1 – Enterprise Logistics Management Platform

Impact: Improved system performance and operational efficiency by optimizing API performance and database queries for high-volume logistics workflows.

Roles and Responsibilities

- Developed and maintained backend services using **Java** and **Spring Boot** for logistics workflow management.
- Designed and implemented **RESTful APIs** to support shipment processing, document handling, and system integrations.
- Contributed to frontend enhancements using Angular for building responsive UI components.
- Participated in upgrading and maintaining legacy Angular applications.
- Optimized backend API performance and improved database query efficiency using **MySQL** indexing and query tuning.
- Implemented validation, **exception handling**, and logging mechanisms to ensure stable and secure service operations.
- Worked closely with cross-functional teams to analyze production issues and deliver quick fixes with minimal downtime.
- Followed **Agile methodology**, participating in **sprint planning**, stand-ups, and code reviews.

Environment: Java, Spring Boot, Angular, TypeScript, REST APIs, MySQL, Maven, Git, JIRA.

Project 2 – ACA E-Comms (E-Commerce Communication Platform)

Impact: Enabled real-time communication of product and transaction updates across e-commerce services.

Roles and Responsibilities:

- Developed backend microservices using **Spring Boot** for managing product notifications and transaction updates.
- Designed **REST APIs** for order communication workflows and customer notification services.
- Implemented database operations using **Hibernate ORM** for efficient data handling.
- Built secure authentication and authorization using Spring Security.
- Optimized **MySQL** database queries to improve performance for high-volume transactional data.
- Collaborated with frontend developers to integrate **APIs** with UI modules and ensure seamless data flow.

Environment: Java, Spring Boot, Hibernate, MySQL, REST APIs, Maven, Git, JIRA.

Project 3 – Learning Management System (LMS):

Impact: Delivered a scalable learning platform supporting course management, student enrollment, and automated quiz evaluation.

Roles and Responsibilities:

- Developed backend services using **Java and Spring Boot** for course management, enrollment, and quiz modules.
- Designed **RESTful APIs** for course creation, lesson management, and student progress tracking.
- Implemented **JWT-based authentication and role-based authorization** using Spring Security.
- Designed and managed database schema using **Hibernate/JPA with MySQL**.
- Implemented **quiz evaluation logic** to calculate scores and track quiz attempts.
- Integrated backend services with **Angular frontend components**.
- Applied **validation, exception handling, and logging** to ensure secure and stable APIs.
- Wrote **unit and integration tests using JUnit and Mockito**.
- Followed **Agile practices** including sprint planning and code reviews.

Environment: Java, Spring Boot, Hibernate/JPA, MySQL, Angular, TypeScript, REST APIs, Spring Security, JWT, Maven, Git, JIRA

Technical Skills:

- Languages : Java, TypeScript, SQL
- Frameworks : Spring Boot, Spring Security, Spring MVC, Hibernate / JPA, Angular
- Databases : MySQL (query optimization, indexing, schema design)
- Security : JWT, Role-Based Access Control (RBAC), Spring Security
- DevOps & Tools : Docker, Jenkins, Git, Maven, JIRA
- Architecture : Microservices, REST API design, MVC pattern
- Methodologies : Agile, Scrum, Code Reviews, Sprint Planning
